

# VESTLAND OFFSHORE LAY-UP MANAGEMENT

*“Doing ordinary things, extraordinary well”*

*Vestland Offshore is providing high quality Ship Management Services in the OSV, Wind and Seismic industry located on the west coast of Norway. We provide hot and cold lay-up solutions by trained professionals and will take care of your asset during lay-up to ensure optimal vessel performance when reactivated.*

## SERVICE HIGHLIGHTS

- Preservation and maintenance
- Security, safety, protection and environment
- Preparation procedures from arrival to lay-up facility, deactivation to reactivation
- Customized solution to meet each Owners requirements

## LAY-UP PHILOSOPHY

There are two basic criteria that the lay-up is designed to meet:

- Maintain the security, safety and protection of the vessel, crew, and the environment.
- Preserve and maintain the structure and machinery by providing protection against corrosion and static seizure. The extent to which a vessel’s owner will lay-up

## COLD LAY-UP

- Common for a duration of more than 12 months
- Machinery is taken out of service and the vessel is kept “electrically dead”
- Low operational cost during lay-up
- Good planning and competency will enable valid vessel certificates up to 12 months

## HOT LAY-UP

- Typical duration of up to 12 months
- To ensure fast recommissioning, machinery is kept in operation and trading certificates are kept valid
- Measures to be taken to optimize operational costs, such as reducing manning to a safe minimum
- Ideal for quick market recoveries, as the vessel is kept in a fully functional state
- Low re-activation cost
